

Tailored automation for treasury & finance

Automation of treasury and finance processes often results in a positive business case where the benefits for a company outweigh the costs. At Automation Boutique, we guide companies through every stage of their automation journey, including discovering the benefits of automation, developing the automation (fully tailored), and harvesting the benefits of automation.

Our solutions can work together with your existing systems (e.g., TMS, ERP, CMS, Excel).

OUR TOOLS

Robotic Process Automation (RPA)

Excel automation

Power BI automation

API integration

Artificial Intelligence (AI)

GET IN TOUCH

WHO WE ARE

Our team has a background in corporate treasury, finance, mathematics, and computer sciences. We use our expertise to tailor simple and elegant solutions that boost efficiency and make things run smoother. And most importantly, we're here to help people, not replace them. We love going the extra mile to make our clients say 'wow!'

OUR MISSION

At Automation Boutique, we're all about making life easier for treasury and finance departments. To achieve that, we use technology to automate finance and treasury processes, thereby decreasing the need for manual, repetitive work and freeing teams to concentrate on more valuable tasks.

HOW TO GET STARTED

Our clients often start with a small, well-planned project, aiming for quick wins within 2-12 weeks. We typically focus on automating repetitive tasks with a modest budget and use existing tools to ensure organizational familiarization with the process. Once some early success is achieved, this lays the foundation for more extensive automation projects.
